

HENG JING YU

BACHELOR OF COMPUTER SCIENCE

(INFORMATION SYSTEM) UNIVERSITY OF MALAYA

Address: Kuala Lumpur, Selangor | Phone: +6011-5369-1109 | Email: jingyu20958@gmail.com |
GitHub: [jingyu09](#) | LinkedIn: [Heng Jing Yu](#)

SUMMARY

Year 2 Computer Science (Information Systems) student at the University of Malaya with a strong foundation in backend development, Java, and database systems. Experienced in building high-concurrency systems and managing project logistics. Quick learner, adaptable, and comfortable working in multilingual environments (Fluent in English, Chinese, and Malay; Conversational in French).

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript (Vanilla JS)
Frameworks & Tools: Spring Boot, MyBatis, RESTful APIs, Git/GitHub, Docker, Apache JMeter
Databases & Middleware: MySQL, Redis, RabbitMQ
Core Concepts: High-Concurrency Architecture, Object-Oriented Programming (OOP), Distributed Systems, Data Structures, API Integration, Database Optimization

CORE COMPETENCIES

HOD of Logistics — <i>Mental Health Week 2025</i>	Oct 2025 - Dec 2025
- Directed a logistics committee to execute end-to-end campus event operations, ensuring seamless execution for 178 attendees - Managed a strict RM3,000 budget by strategically procuring 85 essential items, negotiating vendor quotes for custom apparel, and sourcing bulk supplies - Developed a comprehensive inventory tracking and financial budgeting system using Google Workspace (Google Sheets) to monitor real-time expenses - Streamlined material distribution and event transport by coordinating on-demand courier schedules, achieving zero delivery delays	

TECHNICAL PROJECTS

Blueprint Seckill — High-Concurrency Flash Sale System https://jingyu09.github.io/blueprint-seckill/
- Designed and engineered a 4-layer high-concurrency architecture (Rate Limiting → Redis → MQ → MySQL) independently to handle massive traffic spikes. - Solved critical race conditions and overselling issues by implementing Redis + Lua scripting for atomic inventory deductions. - Optimized system throughput by decoupling database writes via RabbitMQ, ensuring strict data consistency using Snowflake IDs and MySQL unique indexes. - Performance Impact: Validated a 0% error rate and zero oversold items under high-stress JMeter load testing; developed a custom Vanilla JS frontend console for real-time order polling.

EDUCATION

Bachelor of Computer Science (Information System) <i>University of Malaya</i> CGPA: 3.90	Oct 2025 - Mar 2029
Computer Science Program <i>Johor Matriculation College</i> CGPA: 4.00	2024 – 2025
SPM (Sijil Pelajaran Malaysia) <i>SMK SRI PERHENTIAN</i> Result: 9As (3A+, 6A, 1B+)	2019 – 2023
